

How to create a Toast.

```
import android.os.Bundle
import android.widget.Button
import android.widget.Toast
import androidx.appcompat.app.AppCompatActivity

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)

        // Link button from XML
        val btnToast = findViewById<Button>(R.id.btnToast)

        // Show toast when button is clicked
        btnToast.setOnClickListener {
            Toast.makeText(
                this,
                "Button clicked!",
                Toast.LENGTH_SHORT
            ).show()
        }
    }
}
```
